

Content score: 57/100 (Needs Work). All AI bots can access this page.

Page Scorecard

SolCrys AI - AI Search Visibility and AEO Platform

https://solcrys.com/

Template: product

57

Needs Work

CATEGORY	SCORE	RATING	KEY FINDING
Content Quality	84	Good	No technical terms are defined on first mention. Use <dfn> tags or bold text when introducing jargon or product-specific terms.
Credibility	13	Critical	No author byline visible anywhere in the page content. The page is a product landing page with no named author attribution.
Technical Readability	82	Good	Schema missing 4 fields: headline, author, datePublished, publisher
Discoverability	75	Good	No external links in content body. AI engines interpret outbound links as a signal of research quality.

* Overall score = Content Quality 30% + Credibility 35% + Technical Readability 20% + Discoverability 15%

Action Plan — 4 Actions, by Priority

Action 1

Impact: HighEffort: MediumPer page (content-specific)

Add Source Links to Statistics and Claims

WHY IT MATTERS

AI engines use outbound links to authoritative sources as a primary signal of research quality and factual grounding

CURRENT VS RECOMMENDED

ASPECT	CURRENT	RECOMMENDED
External citations	Zero outbound links to authoritative external domains	Add 1+ citations to industry benchmarks, standards, or analyst references
Claim: 'tracks mentions, citations, competitors, sentiment, and accuracy across ChatGPT, Perplexity, Google AI, Gemini, Claude'	No methodology, data sources, or attribution provided	Link to the methodology documentation or third-party verification of tracking capabilities
Claim: 'turns weak answer coverage into content briefs'	No methodology, data sources, or attribution provided	Link to product documentation or case study demonstrating this feature
Statistics density	500-word page with no sourced data points (requires 2-3 sourced statistics)	Add 2-3 specific metrics with source attribution (e.g., platform coverage statistics, user outcomes, industry benchmarks)

Example: Adding inline source attribution to a claim

HTML

<p>SolCrys tracks mentions, citations, competitors, sentiment, and accuracy across ChatGPT, Perplexity, Google AI, Gemini, and Claude (methodology).</p>

Example: Adding a sourced statistic

HTML

<p>According to [INSERT SOURCE NAME], [INSERT STATISTIC ABOUT AI SEARCH ADOPTION OR AEO IMPACT].</p>

DEVELOPER NOTES

This is page-level work. Content team must identify appropriate sources for each claim before implementation. Prioritize linking to methodology docs, product specifications, or third-party analyst reports that validate platform capabilities.

Action 2

Impact: High

Effort: Low

All blog pages (template-level)

Add Structured Data Markup (JSON-LD)

WHY IT MATTERS

AI engines rely on schema markup to identify content type, authorship, and freshness — missing fields prevent proper indexing

CURRENT VS RECOMMENDED

ASPECT	CURRENT	RECOMMENDED
Schema completeness	Missing 4 required fields: headline, author, datePublished, publisher	Add complete WebPage or Product schema with all required fields
Machine-readable publish date	No machine-readable publish date found in JSON-LD or meta tags	Add datePublished and dateModified in ISO 8601 format

Complete WebPage schema for product landing page

JSON

```
{
  "@context": "https://schema.org",
  "@type": "WebPage",
  "headline": "SolCrys AI - AI Search Visibility and AEO Platform",
  "url": "https://solcrys.com/",
  "datePublished": "[INSERT PUBLISH DATE in YYYY-MM-DD format]",
  "dateModified": "[INSERT LAST MODIFIED DATE in YYYY-MM-DD format]",
  "author": {
    "@type": "Organization",
    "name": "[INSERT AUTHOR NAME or use 'SolCrys AI Team']"
  },
  "publisher": {
    "@type": "Organization",
    "name": "SolCrys AI",
    "logo": {
      "@type": "ImageObject",
      "url": "[INSERT LOGO URL]"
    }
  },
  "description": "[INSERT META DESCRIPTION]",
  "image": "[INSERT FEATURED IMAGE URL]"
}
```

DEVELOPER NOTES

Template-level fix. Add this schema block to the product page template. If using a CMS, map fields to existing metadata fields (publish date, author, featured image) to auto-populate schema across all product pages.

Action 3

Impact: Medium

Effort: Low

Per page (content-specific)

Add an Author Byline

WHY IT MATTERS

AI engines use visible author attribution to assess content accountability and expertise signals for credibility scoring

CURRENT VS RECOMMENDED

ASPECT

CURRENT

RECOMMENDED

Author byline visibility

No author byline visible anywhere in the page content

Add visible author attribution (individual name or 'SolCrys AI Team') near the top of the page

Author byline with optional link to author profile

HTML

```
<div class="author-byline">
<p>By <a href="[INSERT AUTHOR PROFILE URL or remove link]"><span itemprop="author">[INSERT AUTHOR NAME or 'SolCrys AI Team']</span></a></p>
</div>
```

DEVELOPER NOTES

Page-level fix. For product pages, consider using a team attribution ('SolCrys AI Team') if individual authorship doesn't apply. Ensure the author name matches the schema markup added in Action #2.

Action 4

Impact: Medium

Effort: Low

Per page (content-specific)

Add or Update Publication Date

WHY IT MATTERS

AI engines use publication dates to assess content freshness and prioritize recent information in answer generation

CURRENT VS RECOMMENDED

ASPECT	CURRENT	RECOMMENDED
Visible publication date	No date signals present in metadata (datePublished: none found, dateModified: none found)	Add visible publication date and last-updated date near the top of the page

Visible date stamp with machine-readable markup

HTML

```
<div class="date-stamp">
<p>Published: <time itemprop="datePublished" datetime="[INSERT PUBLISH DATE in YYYY-MM-DD format]">[INSERT HUMAN-READABLE DATE]</time></p>
<p>Last updated: <time itemprop="dateModified" datetime="[INSERT LAST MODIFIED DATE in YYYY-MM-DD format]">[INSERT HUMAN-READABLE DATE]</time></p>
</div>
```

DEVELOPER NOTES

Page-level fix that should be coordinated with Action #2 (schema markup). Use the same ISO 8601 dates in both the visible HTML and JSON-LD schema. If the page is evergreen, use the current date as the initial publish date and update dateModified whenever content changes.
