Workspace Deep Analysis

See how AI answers talk about your brand, find out why, and get a clear plan your team can work through in Actions Hub.

Work in a monthly rhythm

Once a month	During the month	Next month
Run one Workspace Deep Analysis on up to 10 prompts that matter most to you.	Review the actions, add the ones you'll do to Actions Hub, and get them done.	Check what changed on Prompt Analysis, then run your next analysis.

Why monthly? Each analysis gives you a three-week plan, and changes often take a few weeks to show up in AI answers. Results come from doing the work, not from running the analysis again.

Follow the flow

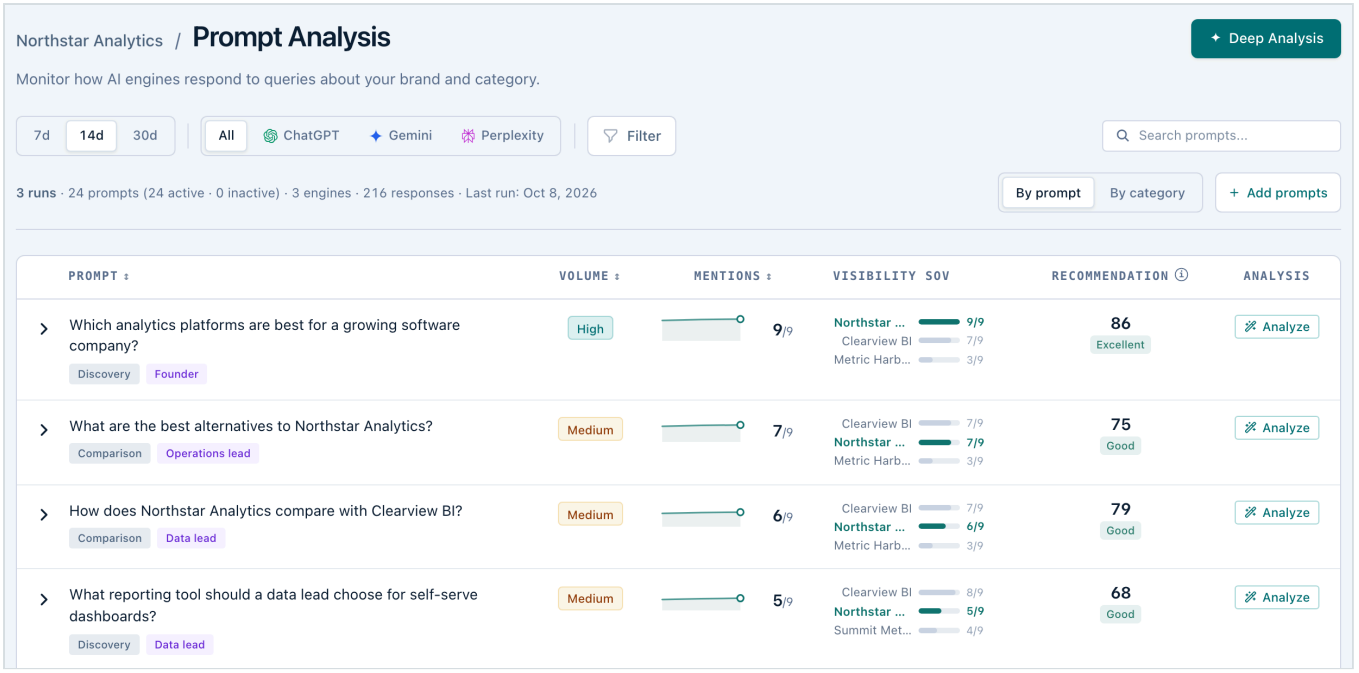

1	2	3	4	5	6	7
Check your prompts	Run Deep Analysis	See what's working	See what to improve	Review the actions	Add them to Actions Hub	Work on them

Step	Page	What you do
1	2–3	On **Prompt Analysis**, check how each prompt is doing and note the ones that need work.
2	4–5	Select **Deep Analysis**, pick up to 10 prompts and start the analysis.
3	6	Read the verdict and see what already helps your brand.
4	7	See what holds your brand back, with the answers that show it.
5	8–9	Review the recommended actions and how the plan is organized.
6	10	Add the actions you plan to do to **Actions Hub**.
7	11	Assign, publish and track the work, then measure the change next month.
	12	Quick reference and troubleshooting.

Before you start: each prompt needs at least one completed monitoring run in the last 14 days, and three or more runs give a better result. To add prompts or run a measurement, see the **Workspace Setup** guide.

Screenshots use the SolCrys interface with fictional brands, people and results. The controls you see depend on your role, plan and workspace type. October 2026.

Check how each prompt is doing

Prompt Analysis shows, for each question, how often AI answers mention you, which other brands they name and how well they recommend you.

1. Select **Prompt Analysis** in the sidebar.

2. Choose **14d** and **All**. This is the same period Deep Analysis looks at. Use **Filter** or the search box to focus on a topic.

3. Read each row from left to right:

Column	What it tells you
Volume	How often people ask this question, estimated as **High**, **Medium** or **Low**.
Mentions	How many AI answers named your brand, out of all answers in the period. **9/9** means every answer named you. The small line shows the trend.
Visibility SOV	Your share of voice: the brands the answers name for this question, and how often. Your brand is highlighted.
Recommendation	When answers mention you, how strongly they recommend you, from 0 to 100, with a label such as **Excellent**, **Good** or **Average**. Answers that leave you out are not counted here.
Analysis	**Analyze** opens Deep Analysis with this prompt already selected (step 2).

Find the prompts that need work

Expand a row to see each engine's answers and recommendation score.

1. Select the arrow at the start of a row. Each AI engine gets its own line, with its number of answers and its recommendation score.

2. Read the dots. Each dot is one answer: filled when it mentions your brand, hollow when it doesn't, and red when it mentions you with a concern. The larger dot is the latest answer.

3. Select an engine's line to read its answers.

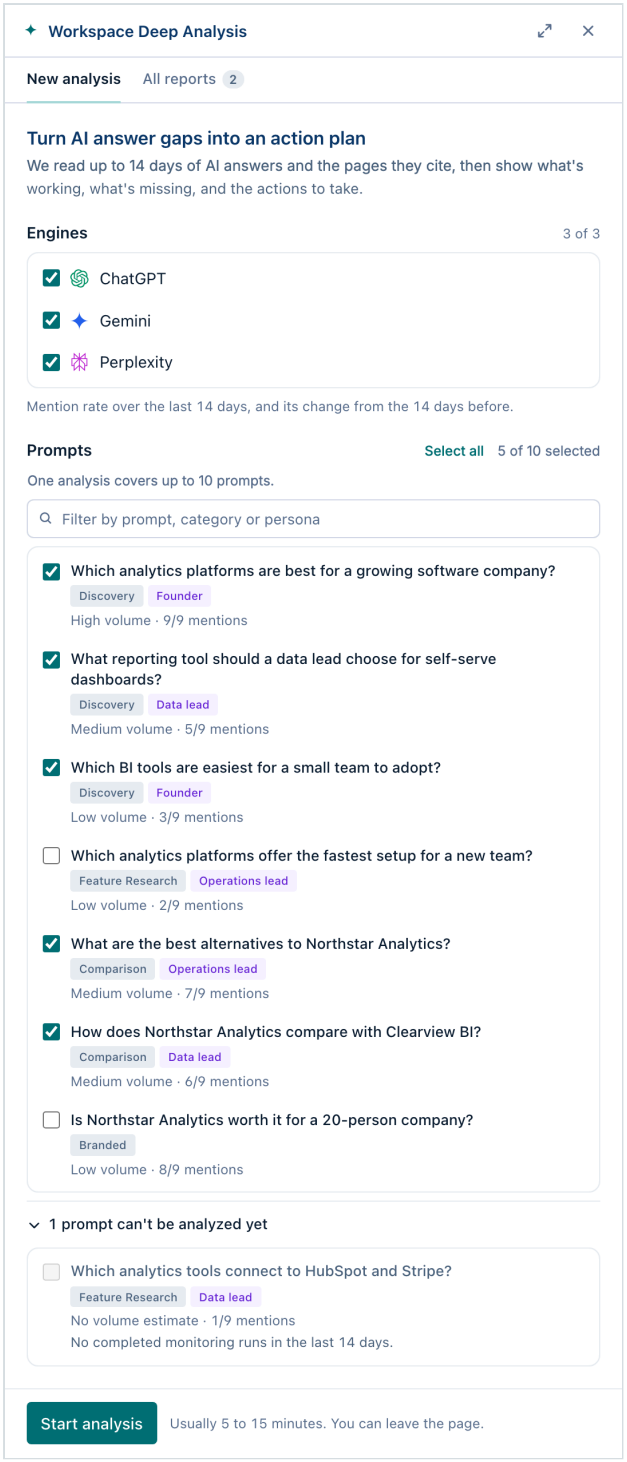

4. Note the prompts where a competitor leads, or where the recommendation is **Average** or lower. In this example, Clearview BI is named in 8 of 9 answers to the small-team question, Perplexity never mentions Northstar Analytics, and one Gemini answer raised a concern.

When you want to know why

Prompt Analysis shows where you stand. Deep Analysis reads the answers and the pages they cite to explain why, and turns what it finds into a plan.

Prompt Analysis tells you	Deep Analysis adds
How often each engine mentions you, prompt by prompt	Why: the sources and pages the answers rely on
Which competitors the answers name	What already works for you, and what holds you back
How well the answers recommend you	A dated plan of actions you can add to Actions Hub

Start a Deep Analysis

New analysis, with the unavailable prompt opened.

Set up the analysis

1. On Prompt Analysis, select **Deep Analysis** at the top right. The panel opens beside the table, on **New analysis**. Or select **Analyze** on any prompt to open it with that prompt already selected.

2. Under **Engines**, keep the AI engines you want included, for example **3 of 3**.

3. Under **Prompts**, recommended prompts are already selected. Add the ones you noted in step 1. One analysis covers up to **10 prompts**, and the counter shows your picks, for example **5 of 10 selected**. **Select all** picks the prompts shown, and **Unselect all** clears them. With more than 10 prompts, the list shows 10 per page.

4. Use **Filter by prompt, category or persona** to find a question. Each row shows its tags, volume and mentions.

5. Open **1 prompt can't be analyzed yet** to see why a prompt isn't available, for example **No completed monitoring runs in the last 14 days**.

6. Select **Start analysis**. It usually takes 5 to 15 minutes, and you can leave the page.

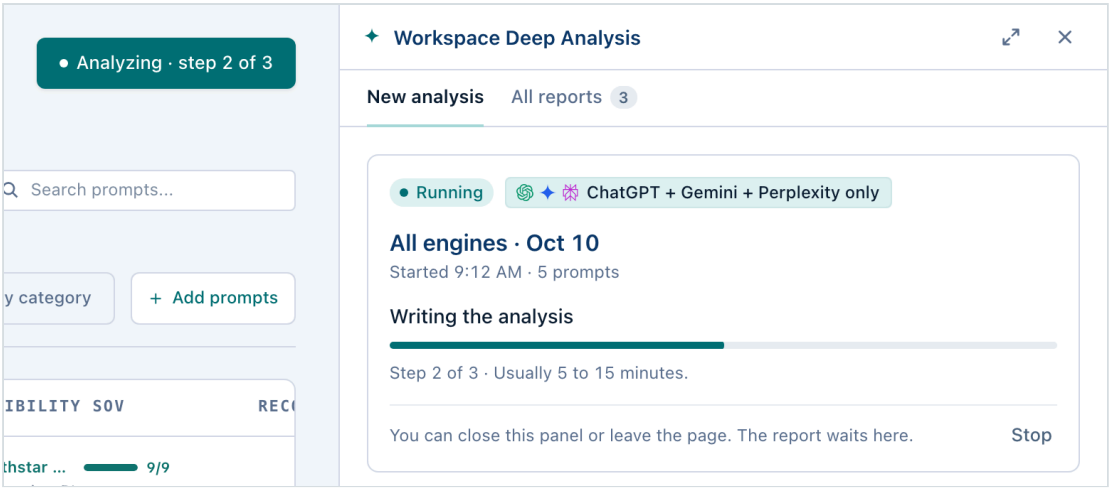

Pick prompts that belong together

Results are strongest when the prompts ask about the same need, such as setup, pricing or comparisons. With up to 10 prompts, one analysis can cover a whole topic. Include a prompt where you already do well: what works there shows what to repeat.

A prompt with fewer than 3 monitoring runs can still be picked. The panel notes that more runs give a better result.

> Each workspace analysis uses one Deep Analysis from your plan's monthly allowance. Only editors can start an analysis; everyone in the workspace can read the reports.

Follow the analysis

While an analysis runs, the header button and the run card show the same step.

1. After **Start analysis**, a run card takes the place of the setup. It names the run by its engines and date, for example **All engines · Oct 10**, with its start time and number of prompts.

2. Follow the steps: **Reading answers and cited pages** (step 1), **Writing the analysis** (step 2), then **Checking the analysis and publishing it** (step 3).

3. Close the panel or leave the page whenever you like. The report waits under **All reports**.

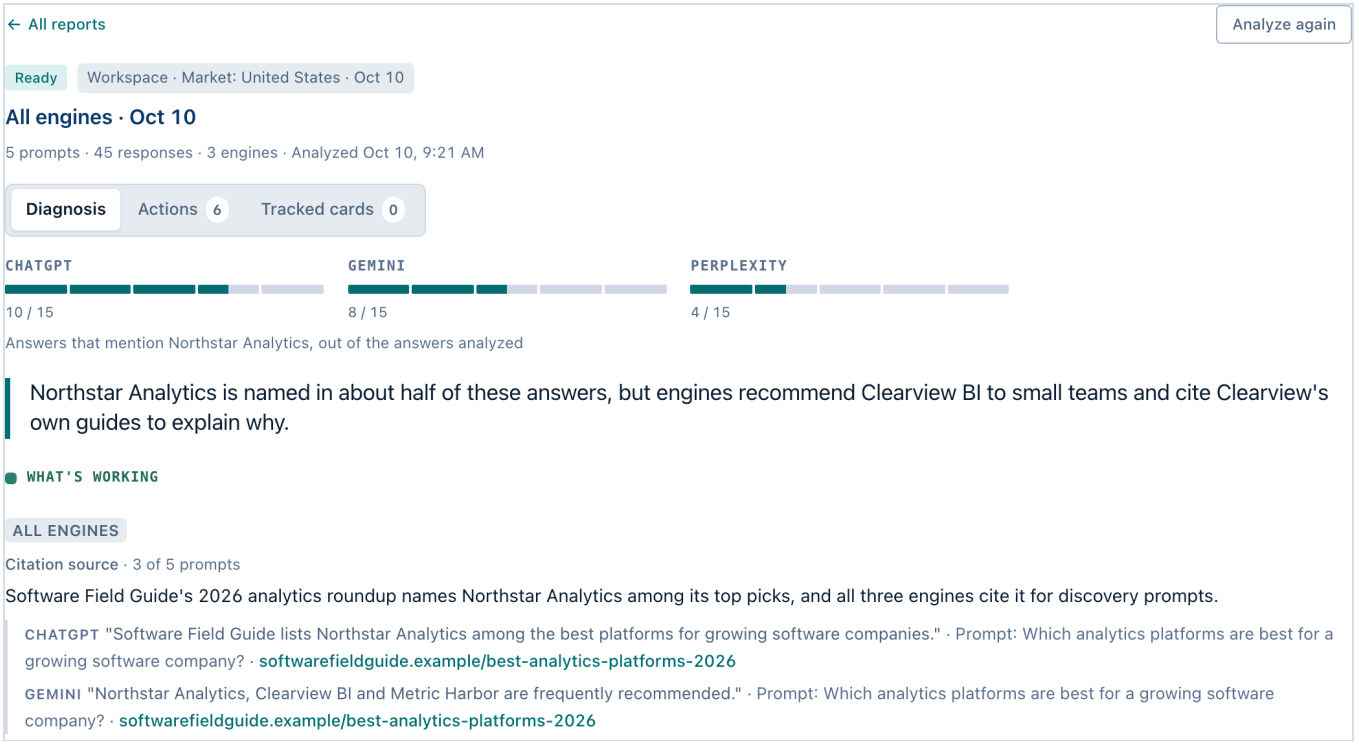

4. Select **Stop** to cancel the run, for example to change its prompts or engines. Then start a new analysis.

Read the header button

State	Button	What it means
Ready to start	✦ Deep Analysis	Opens the panel. With no analysis running, start on **New analysis**.
Running	● Analyzing · step 2 of 3	An analysis is running. Select it to see the run card.
Finished	✦ Report ready ●	A report finished while you were away. Select it to open the report; the dot clears once you've seen it.

> If a run shows **Didn't finish**, open it to read why. If there was too much to read in one analysis, select **Analyze again with fewer prompts**.

Read the verdict and what's working

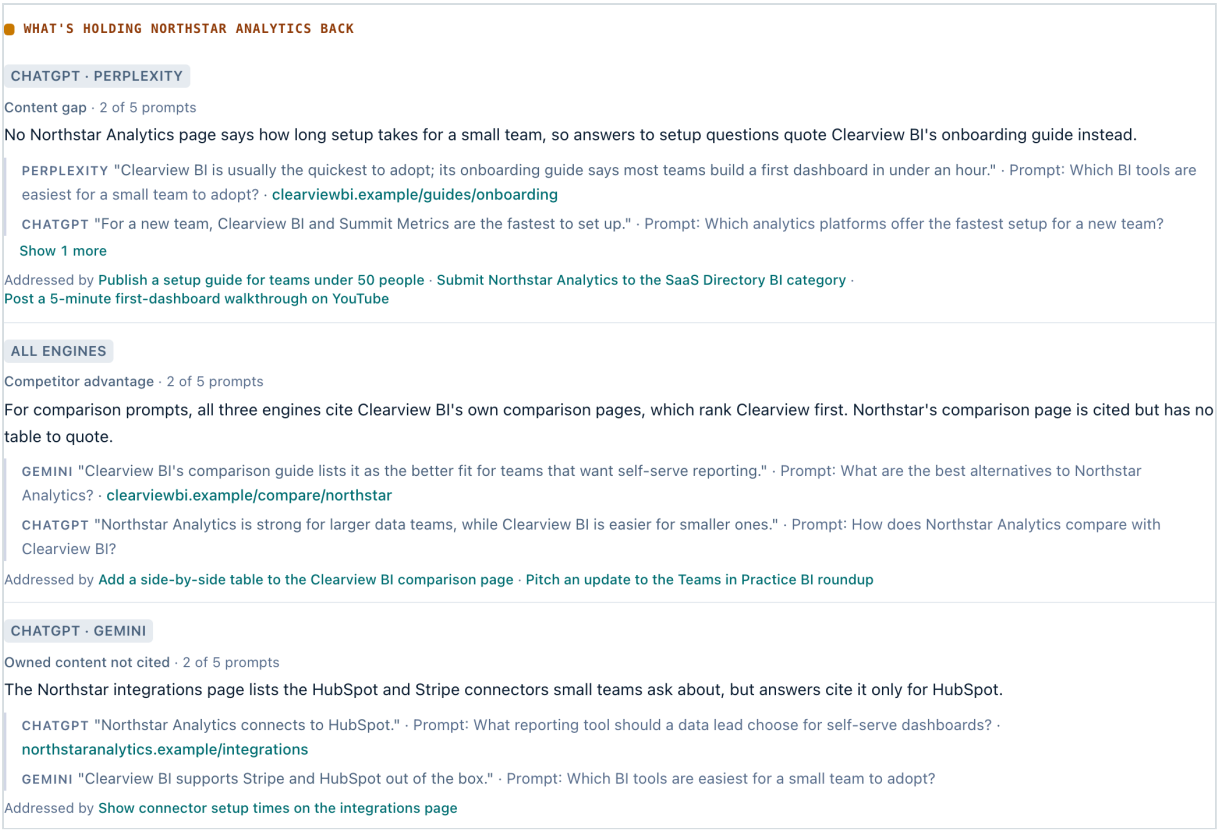

The report opens on Diagnosis: the header, mentions per engine, the verdict and what's working.

Part	What it tells you
Report header	**Ready**, then the workspace, market and date. The line under the name counts the prompts, answers and engines analyzed.
Tabs	**Diagnosis**; **Actions**, with its number of tasks; and **Tracked cards**, with the tasks already in Actions Hub.
Engine bars	For each engine, how many answers mention your brand, best engine first. **4 / 15** means 4 of 15 Perplexity answers named Northstar Analytics.
Verdict	One sentence that sums up the analysis. Read it before the details.
What's working	Sources that already help you, such as a roundup article that names your brand and that every engine cites. Keep them accurate and up to date.

> The bars count AI answers, not website visits. If no engine mentions your brand, Diagnosis shows **No AI visibility for these prompts** and lists every finding under what holds you back. Select the expand icon at the top of the panel for a full-width view, and **Back to side panel** to return.

See what holds your brand back

Each finding names its engines, type and reach, then shows the answers behind it.

1. Read the engine label above each finding, such as **ALL ENGINES** or **CHATGPT · PERPLEXITY**. Findings are grouped by the engines they come from.

2. Read the type and reach, for example **Content gap · 2 of 5 prompts**, then the finding itself.

3. Check the evidence. Each row shows the engine, the answer's own words, the prompt and, when there is one, the page the answer cited. Select **Show 1 more** for the rest.

4. Select a task under **Addressed by** to jump to the action that fixes it.

Finding type	What it means
Content gap	Answers need information that none of your pages gives, so they quote someone else.
Competitor advantage	Answers rely on sources that favor a competitor, such as the competitor's own comparison guides.
Owned content not cited	You have a relevant page, but answers don't cite it for these prompts.
Citation source	A page the answers cite. Under **What's working**, it already names your brand.

Review the recommended actions

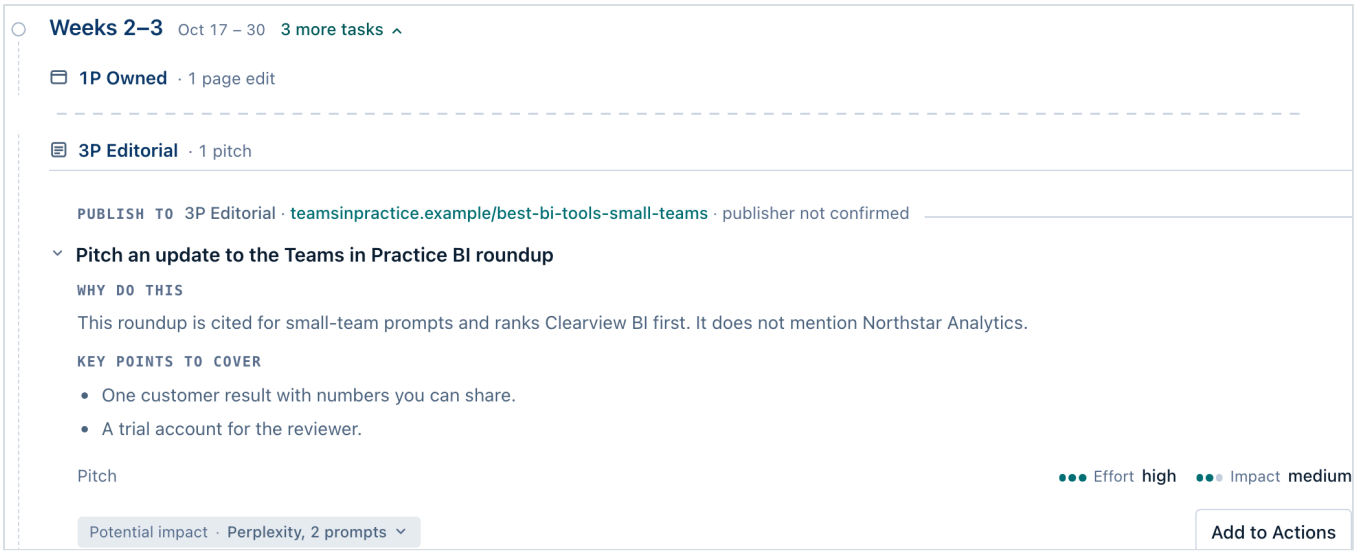

The Actions tab sums up the plan in one sentence, then lists Week 1.

Card part	What it tells you
Publish to	Where the work goes. **1P Owned** is your own website, **3P Editorial** is another site's article or listing, and a platform name such as **YouTube** means a post there. **New page** or **New post** means it doesn't exist yet.
Title	The task in one line. Select it to fold or unfold the card.
Why do this	What the AI answers show, and why this page matters.
Key points to cover	What the page, listing or pitch should say.
Kind	The type of task, such as Page edit, New page, Listing, Pitch, Post or Case study, at the card's lower left.
Effort, **Impact**	Low, medium or high. Effort is how much work the task takes; impact is how much it could help. Point to **Impact** for a short reason.
Potential impact	The engines and the number of prompts the task could help. Select it to see those prompts.
Add to Actions	Sends the task to Actions Hub (step 6). The filled button marks the next Week 1 task you haven't added yet.

See how the plan is organized

The tasks are already in order, so you can start at the top and work down.

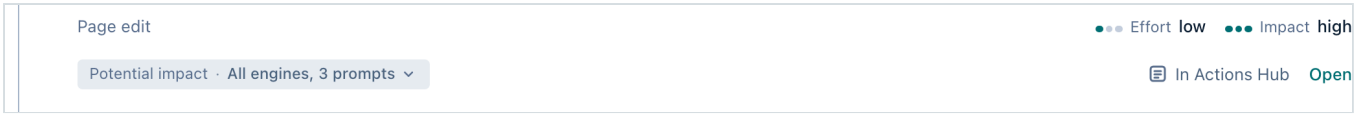

Part of the plan	What it holds
Week 1	The tasks most likely to make a difference. Start here.
Weeks 2–3	The remaining tasks, grouped by where you publish: **1P Owned** (your own website), **3P Editorial** (other sites) and **UGC** (social and video platforms).

Weeks 2–3 opens from its heading. Each group lists its tasks.

> Dates follow the report: Week 1 is the 7 days from the day it finished, and Weeks 2–3 the 14 days after. That leaves the rest of the month for your changes to show up before your next analysis.
>
> A note beside a destination, such as **publisher not confirmed** or **not cited yet**, means we couldn't confirm it. Check that the site accepts listings or pitches before you start.

Add planned actions to Actions Hub

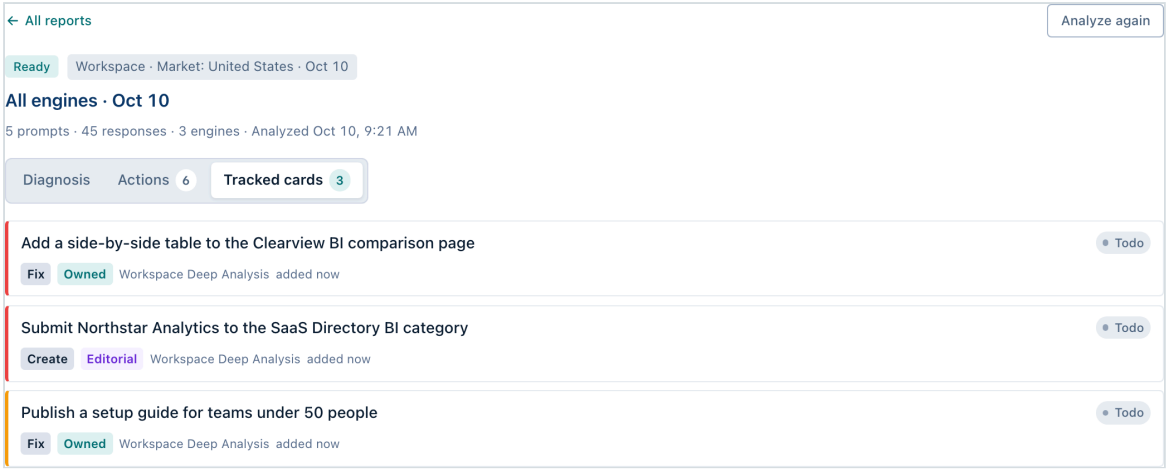

After Add to Actions, the card shows In Actions Hub and an Open link.

1. Start with Week 1. Select **Add to Actions** on each task you plan to do. The card changes to **In Actions Hub**, and the plan's summary line counts the tasks added, for example **3 added to Actions Hub**.

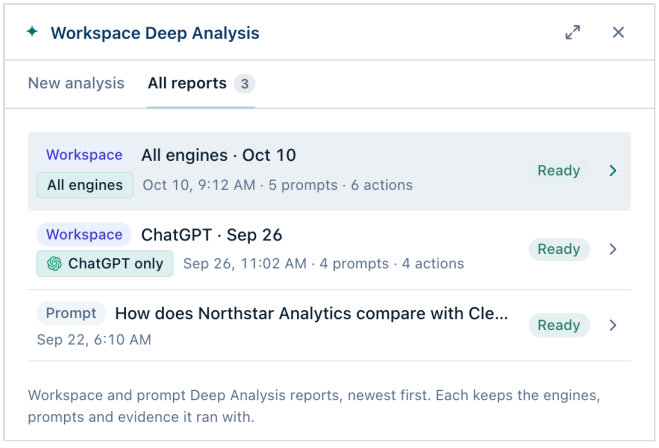

2. Add tasks from Weeks 2–3 when your team has room for them. Leave out any you decide not to do.

3. Open **Tracked cards** to see every task from this report and its status in Actions Hub.

Tracked cards lists this report's tasks in Actions Hub, with their status.

Come back to a report

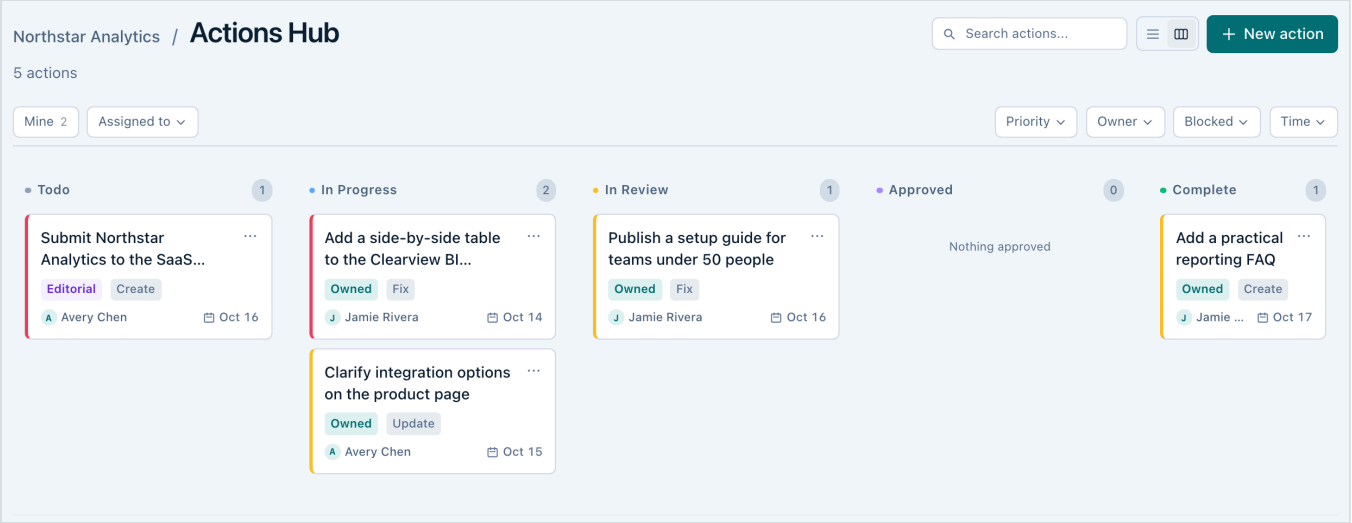

All reports, newest first.

4. Select **All reports** in the panel. Your reports are listed newest first, each with its engines, time, number of prompts and number of actions. Older single-prompt reports appear in the same list.

5. Select a row to open the report. Each report keeps the engines, prompts and evidence it ran with.

Work on the actions

Actions Hub shows each task's stage, owner and due date. Three days later, the Week 1 tasks are under way.

1. Select **Open** on a task card, or open **Actions Hub** in the sidebar. In **List view**, tasks from the analysis show **Workspace Deep Analysis** as their source.

2. Open a task to read its brief from the analysis: where to publish, the key points and the evidence behind it.

3. Set an owner, priority and due date where those controls are available.

4. Move the task through **Todo**, **In Progress**, **In Review** and **Approved** as the work moves along. In **Board view**, drag the card to its new column.

5. When the content is live, open **Publish**, enter the **Published URL** and choose **Mark as Published**. The task moves to **Complete**.

Measure the change next month

6. About a month after your analysis, return to **Prompt Analysis** and compare **Mentions** and **Recommendation** for the prompts your tasks named.

7. Then run your monthly analysis: open the last report and select **Analyze again** to start a new analysis with the same engines. Compare it with the earlier report under **All reports**.

> Adding a task records planned work. It doesn't publish anything or guarantee a result; the next measurements show what changed.

The flow at a glance

> **Once a month:** run one analysis. **During the month:** review the actions and get them done. **Next month:** measure, then analyze again.

1. Check your prompts. On **Prompt Analysis**, choose **14d**, read Mentions, Visibility SOV and Recommendation, and expand the rows that look weak.

2. Run Deep Analysis. Select **Deep Analysis** (or **Analyze** on a prompt), pick up to 10 prompts about the same need and select **Start analysis**.

3. See what's working. Read the verdict, the engine bars and **What's working**.

4. See what to improve. Read each finding under what holds your brand back, and check its evidence.

5. Review the actions. On **Actions**, read Week 1 first: where to publish, why, what to cover, effort and impact.

6. Add them to Actions Hub. Select **Add to Actions** on the tasks you plan to do.

7. Work on them. Assign owners and dates, publish, mark tasks published, then measure and analyze again next month.

When a result needs explanation

Question	What to check
A prompt can't be analyzed	It needs a completed monitoring run in the last 14 days, and it must be active. Open the unavailable list for the reason.
You can't pick another prompt	One analysis covers up to 10 prompts. Uncheck one to pick another.
Start analysis is unavailable	Pick at least one engine and one prompt. Only editors can start an analysis. If your plan has no Deep Analyses left this month, the panel says so.
The run says Didn't finish	Open it for the reason. If there was too much to read, analyze again with fewer prompts.
No actions this time	No action passed our quality checks. The Diagnosis still applies, and the Actions tab explains why.
A task you expected is missing	The plan keeps the tasks most likely to make a difference. Check whether the answers analyzed cite the page you had in mind.
Numbers differ from Prompt Analysis	Deep Analysis reads only the prompts and engines you picked, over up to the last 14 days.
A destination has a note	**publisher not confirmed** or **not cited yet**: check that the site accepts the listing or pitch before you start.

> Findings describe the AI answers we measured and the pages they cite. They are not website traffic, and a task's impact is an estimate, not a promise of results.
