

Workspace Deep Analysis

Go from checking how AI answers treat your brand, to understanding why, to a plan your team works through in Actions Hub.

Follow the flow

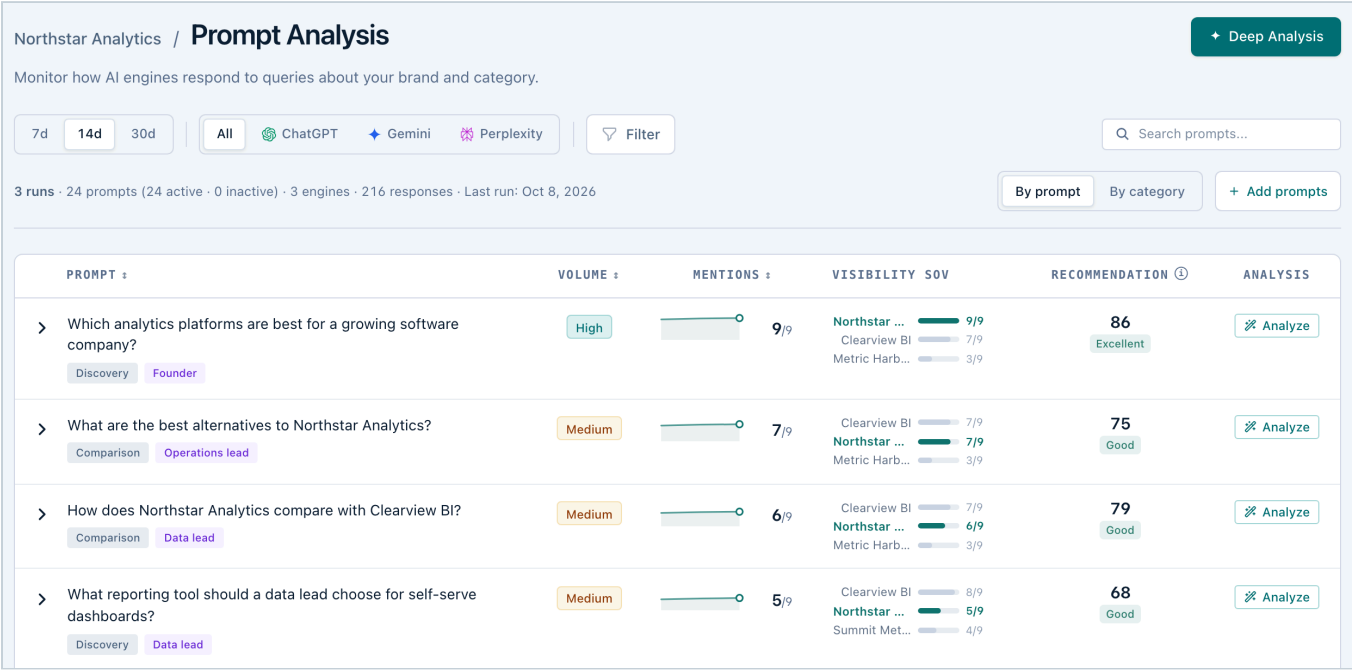

Step	Page	What you do
1	2–3	On Prompt Analysis , check each prompt's visibility and recommendation, and note the prompts that need work.
2	4–5	Select Deep Analysis , pick up to six prompts and start the analysis.
3	6	Read the verdict and see what already helps your brand.
4	7	See what holds your brand back, with the answers that prove it.
5	8–9	Review the recommended actions and how the plan is ordered.
6	10	Add the actions you plan to do to Actions Hub .
7	11	Assign, publish and track the work, then measure the change.
	12	Quick reference and troubleshooting.

Before you start: each prompt needs at least one completed monitoring run in the last 14 days, and three or more give a better result. If you need to add prompts or run a measurement, see the companion **Workspace Setup** guide.

Screenshots use the updated SolCrys interface with fictional brands, people and results. Controls depend on your role, plan and workspace type. October 2026.

Check each prompt's visibility and recommendation

Prompt Analysis shows, for each question, how often answers mention you, who else they name and how well they recommend you.

- 1. Select **Prompt Analysis** in the sidebar.
- 2. Choose **14d** and **All** engines. This is the same window Deep Analysis reads. Use **Filter** or the search box to focus on a topic.
- 3. Read each row from left to right:

Column	How to read it
Volume	An estimate of how often people ask this question: High , Medium or Low .
Mentions	Answers that mention your brand, out of all answers in the range. 9/9 means every answer named you. The line shows the trend.
Visibility SOV	The brands answers name for this question, with their counts. Your brand is highlighted.
Recommendation	How well the answers that mention you recommend you, from 0 to 100, with a tier such as Excellent , Good or Average . Answers that leave you out are not counted.
Analysis	Analyze studies one question on its own (a prompt Deep Analysis).

Find the prompts that need work

Expand a row to see each engine's answers and recommendation score.

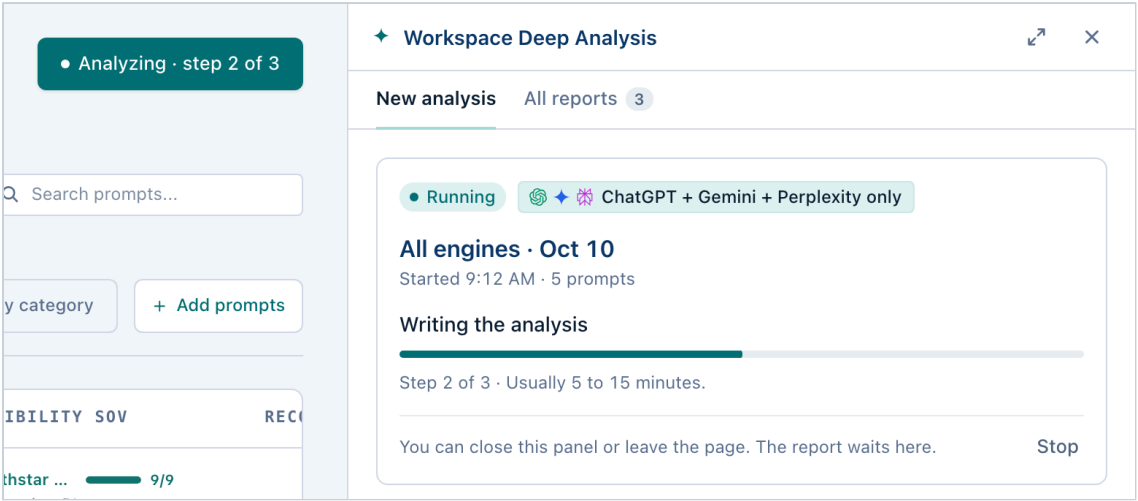

1. Select the arrow at the start of a row. Each engine gets its own line, with its answer count and recommendation score.
2. Read the dots. Each dot is one answer: filled when it mentions your brand, hollow when it does not, and red when it mentions you with a concern. The larger dot is the latest answer.
3. Select an engine's line to read its answers.
4. Note the prompts where a competitor leads or the recommendation is **Average** or lower. Here, Clearview BI is named in 8 of 9 answers to the small-team question, Perplexity never mentions Northstar Analytics, and one Gemini answer raised a concern.

When you want to know why

Prompt Analysis shows where you stand. Deep Analysis reads the answers and the pages they cite to explain it, and turns what it finds into actions.

Prompt Analysis tells you	Deep Analysis adds
How often each engine mentions you, prompt by prompt	Why: the sources and pages the answers rely on
Which competitors the answers name	What already works for you, and what holds you back
How well the answers recommend you	A dated plan of actions you can add to Actions Hub

Follow the analysis

While a run works, the header button and the run card show the same step.

1. After **Start analysis**, the run card takes Start's place. It names the run by its engines and date, for example **All engines · Oct 10**, with its start time and prompt count.
2. Read the step: **Reading answers and cited pages** (step 1), **Writing the analysis** (step 2), then **Checking the analysis and publishing it** (step 3).
3. Close the panel or leave the page whenever you like. The report waits under **All reports**.
4. Select **Stop** to cancel the run, for example to change its prompts or engines. Then start a new analysis.

Read the header button

State	Button	Meaning
Ready to start	✦ Deep Analysis	Opens the panel. With no run in progress, start on New analysis .
Running	● Analyzing · step 2 of 3	A run is working. Select it to see the run card.
Finished	✦ Report ready ●	A report finished while you were away. Select it to open the report; the dot clears once you have seen it.

If a run shows **Didn't finish**, open it to read why. When there was too much evidence for one analysis, select **Analyze again with fewer prompts**.

Answers that mention Northstar Analytics, out of the answers analyzed

Northstar Analytics is named in about half of these answers, but engines recommend Clearview BI to small teams and cite Clearview's own guides to explain why.

WHAT'S WORKING

ALL ENGINES

Citation source · 3 of 5 prompts

Software Field Guide's 2026 analytics roundup names Northstar Analytics among its top picks, and all three engines cite it for discovery prompts.

CHATGPT "Software Field Guide lists Northstar Analytics among the best platforms for growing software companies." · Prompt: Which analytics platforms are best for a growing software company? · [softwarefieldguide.example/best-analytics-platforms-2026](#)

GEMINI "Northstar Analytics, Clearview BI and Metric Harbor are frequently recommended." · Prompt: Which analytics platforms are best for a growing software company? · [softwarefieldguide.example/best-analytics-platforms-2026](#)

The report opens on Diagnosis: the header, mentions per engine, the verdict and what's working.

Part	How to read it
Report header	Ready , then Workspace, market and date. The line under the name counts the prompts, responses and engines analyzed.
Tabs	Diagnosis , Actions with its task count, and Tracked cards with the tasks already in Actions Hub.
Engine bars	Answers that mention your brand, out of the answers analyzed, best engine first. 4 / 15 means 4 of 15 Perplexity answers named Northstar Analytics.
Verdict	One sentence that sums up the analysis. Read it before the details.
What's working	Sources that already help you, such as a roundup that names your brand and that every engine cites. Keep them accurate and current.

The bars count answers, not traffic. If no engine mentions your brand, Diagnosis shows **No AI visibility for these prompts** and lists every finding under what holds you back. Select the expand icon at the top of the panel for a full-width view, and **Back to side panel** to return.

See what holds your brand back

WHAT'S HOLDING NORTHSTAR ANALYTICS BACK

CHATGPT · PERPLEXITY

Content gap · 2 of 5 prompts

No Northstar Analytics page says how long setup takes for a small team, so answers to setup questions quote Clearview BI's onboarding guide instead.

PERPLEXITY "Clearview BI is usually the quickest to adopt; its onboarding guide says most teams build a first dashboard in under an hour." · Prompt: Which BI tools are easiest for a small team to adopt? · [clearviewbi.example/guides/onboarding](#)

CHATGPT "For a new team, Clearview BI and Summit Metrics are the fastest to set up." · Prompt: Which analytics platforms offer the fastest setup for a new team?

Show 1 more

Addressed by [Publish a setup guide for teams under 50 people](#) · [Submit Northstar Analytics to the SaaS Directory BI category](#) · [Post a 5-minute first-dashboard walkthrough on YouTube](#)

ALL ENGINES

Competitor advantage · 2 of 5 prompts

For comparison prompts, all three engines cite Clearview BI's own comparison pages, which rank Clearview first. Northstar's comparison page is cited but has no table to quote.

GEMINI "Clearview BI's comparison guide lists it as the better fit for teams that want self-serve reporting." · Prompt: What are the best alternatives to Northstar Analytics? · [clearviewbi.example/compare/northstar](#)

CHATGPT "Northstar Analytics is strong for larger data teams, while Clearview BI is easier for smaller ones." · Prompt: How does Northstar Analytics compare with Clearview BI?

Addressed by [Add a side-by-side table to the Clearview BI comparison page](#) · [Pitch an update to the Teams in Practice BI roundup](#)

CHATGPT · GEMINI

Owned content not cited · 2 of 5 prompts

The Northstar integrations page lists the HubSpot and Stripe connectors small teams ask about, but answers cite it only for HubSpot.

CHATGPT "Northstar Analytics connects to HubSpot." · Prompt: What reporting tool should a data lead choose for self-serve dashboards? · [northstaranalytics.example/integrations](#)

GEMINI "Clearview BI supports Stripe and HubSpot out of the box." · Prompt: Which BI tools are easiest for a small team to adopt?

Addressed by [Show connector setup times on the integrations page](#)

Each finding names its engines, type and reach, then shows the answers that prove it.

- 1. Read the engine chip above each finding, such as **ALL ENGINES** or **CHATGPT · PERPLEXITY**. Findings are grouped by the engines they come from.
- 2. Read the type and reach, for example **Content gap · 2 of 5 prompts**, then the statement.
- 3. Check the evidence. Each row gives the engine, the answer's own words, the prompt and, when there is one, the cited page. Select **Show 1 more** for the rest.
- 4. Select a task under **Addressed by** to see the action that fixes it.

Finding type	What it means
Content gap	Answers need information none of your pages gives, so they quote someone else's.
Competitor advantage	Answers rely on sources that favor a competitor, such as its own comparison guides.
Owned content not cited	You have a relevant page, but answers do not cite it for these prompts.
Citation source	A page the answers cite. Under What's working , it already names your brand.

Review the recommended actions

Make one page edit, submit one listing and publish one new page in Week 1, then make one page edit, publish one post and send one pitch in Weeks 2–3.

PUBLISH TO 1P Owned · [northstaranalytics.example/compare/clearview-bi](#)

▾ Add a side-by-side table to the Clearview BI comparison page

WHY DO THIS

All three engines cite this page for comparison prompts, yet they still describe Clearview BI as the easier choice. The page has no table answers can quote.

KEY POINTS TO COVER

- Setup time, pricing tier and seat limits for both products, in one table.
- The connectors each product supports out of the box.
- A short note on which team size each product fits.

Page edit

●●● Effort low ●●● Impact high

Potential impact · All engines, 3 prompts ▾

Add to Actions

The Actions tab states the plan in one sentence, then lists Week 1.

Card part	What it tells you
Publish to	The channel and the page. 1P Owned is your own site, 3P Editorial another site's listing or article, and a post names its platform, such as YouTube . New page or New post means it does not exist yet.
Title	The task in one line. Select it to fold the card.
Why do this	What the answers show, and why this page matters to them.
Key points to cover	What the page, listing or pitch should say.
Kind	Page edit, New page, Listing, Pitch, Post, Case study and others, at the card's lower left.
Effort, Impact	Low, medium or high. Point to Impact to read why, for example <i>Cited on 3 of 5 prompts in answers that leave Northstar Analytics out</i> .
Potential impact	The engines whose answers cite the page, and how many prompts the task can move. Select it to list those prompts.
Add to Actions	Sends the task to Actions Hub (step 6). The filled button marks the next Week 1 task not yet added.

8 / 12

See how the plan is ordered

6 tasks over 3 weeks · 0 added to Actions Hub · See how this plan is built ^

1. Week 1 holds the 3 tasks with the highest impact; when impact ties, lower effort comes first, then the analysis's order. The rest follow in Weeks 2–3, grouped by channel.

2. Effort is low for new content and edits on your own site, for posts on your own channels and for replies in Reddit threads the answers cite, and high for listings and pitches on other sites.

3. Impact looks at how many of your prompts have answers that cite the page, how often answers cite it, and how many AI engines those answers come from. Until answers cite a page, as with a new page, it looks at the prompt's answers that miss Northstar Analytics and reads medium at most. Tasks below medium impact are left out.

4. Each task names its kind and channel: 1P Owned, a page on your own site; 3P Editorial, a listing or pitch on another site; UGC, a post on a social or video platform.

Select See how this plan is built for the rules behind the order.

Rule	How it works
Week 1	The 3 tasks with the highest impact. On a tie, lower effort comes first, then the analysis's own order.
Weeks 2–3	The remaining tasks, grouped by channel: 1P Owned, 3P Editorial and UGC.
Effort	Low for new content and edits on your own site, posts on your own channels and replies in Reddit threads the answers cite. High for listings and pitches on other sites.
Impact	How many of your prompts have answers citing the page, how often, and from how many engines. A new page reads medium at most until answers cite it. Tasks below medium are left out.

Weeks 2–3

Oct 17 – 30

Pitch an update to the Teams in Practice BI roundup

WHY DO THIS

This roundup is cited for small-team prompts and ranks Clearview BI first. It does not mention Northstar Analytics.

KEY POINTS TO COVER

One customer result with numbers you can share.

A trial account for the reviewer.

Pitch

●●● Effort high ●●● Impact medium

Potential impact · Perplexity, 2 prompts ^

Add to Actions

Weeks 2–3 opens from its heading. Each channel group lists its tasks.

Dates follow the report: Week 1 is the 7 days from the day it finished, and Weeks 2–3 the 14 after. A note beside a destination, such as **publisher not confirmed** or **not cited yet**, means the checks could not confirm it. Verify it before you act.

SolCrys | Workspace Deep Analysis

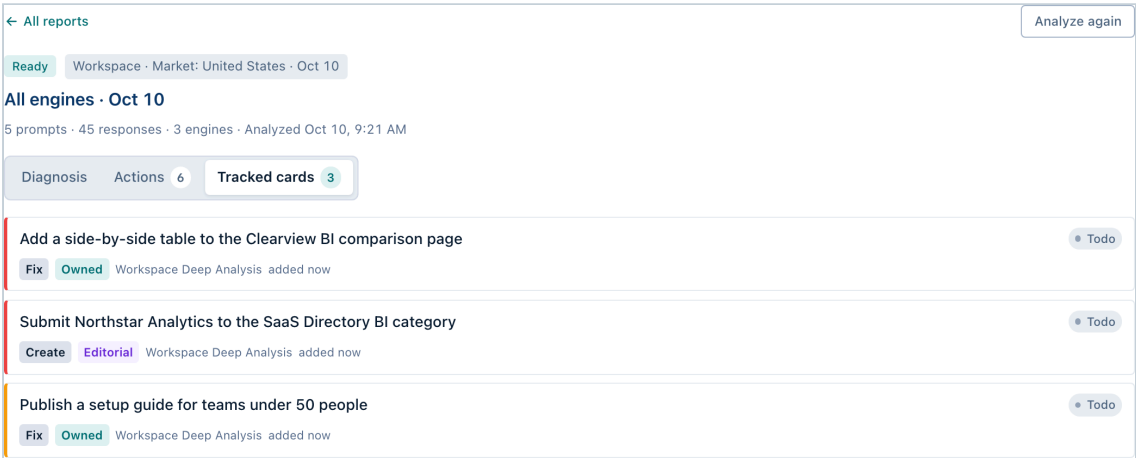

9 / 12

Add planned actions to Actions Hub

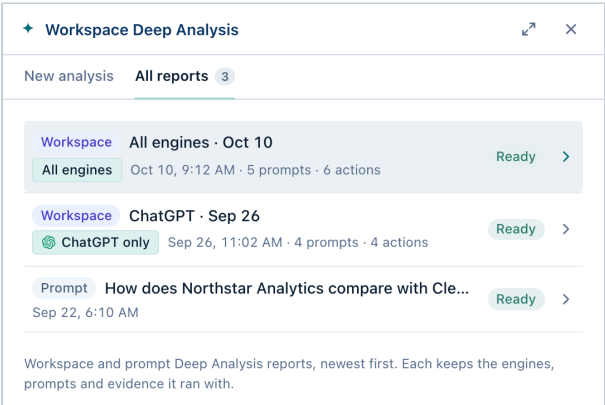

After Add to Actions, the card shows In Actions Hub and an Open link.

1. Start with Week 1. Select **Add to Actions** on each task you plan to do. The card changes to **In Actions Hub**, and the plan's line counts the tasks added, for example **3 added to Actions Hub**.
2. Add tasks from Weeks 2–3 when your team has room for them. Leave out any you decide not to do.
3. Open **Tracked cards** to see every task from this report and its status in Actions Hub.

Tracked cards lists this report's tasks in Actions Hub, with their status.

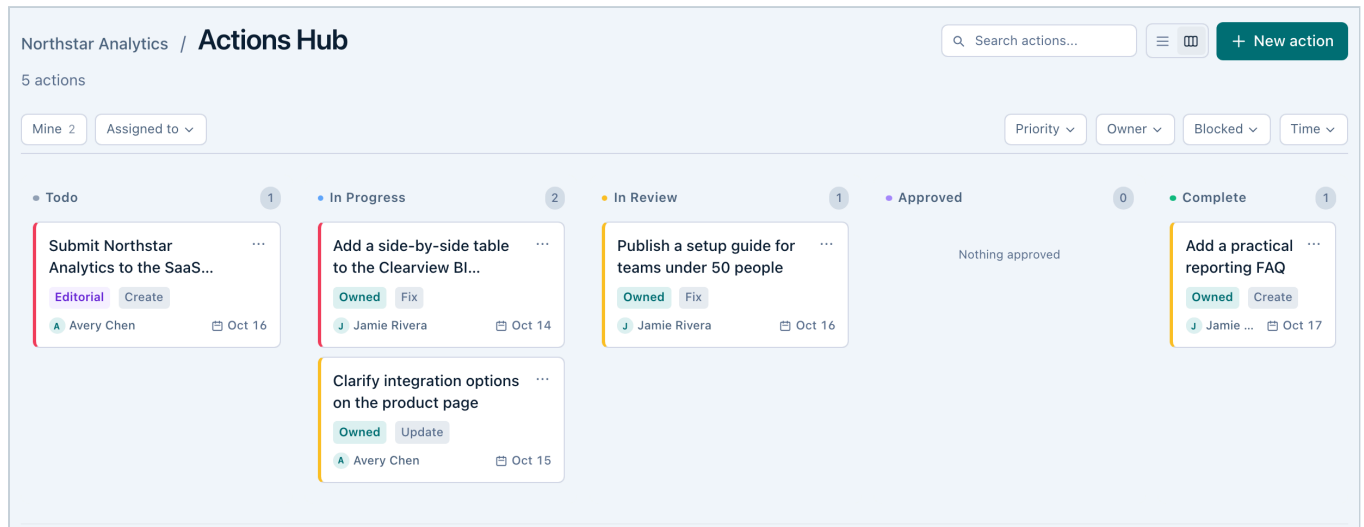

Come back to a report

All reports, newest first.

4. Select **All reports** in the panel. Workspace and prompt reports share one list, newest first; workspace rows show their engines, time, prompt count and action count.
5. Select a row to open the report. Each report keeps the engines, prompts and evidence it ran with.

Work on the actions

Actions Hub shows each task's stage, owner and due date. Three days later, the Week 1 tasks are under way.

1. Select **Open** on a task card, or open **Actions Hub** in the sidebar. In **List view**, tasks from the analysis show **Workspace Deep Analysis** as their source.
2. Open a task to read its brief from the analysis: where to publish, the key points and the evidence behind it.
3. Set an owner, priority and due date where those controls are available.
4. Move the task through **Todo**, **In Progress**, **In Review** and **Approved** as the work progresses. In **Board view**, drag the card to its new column.
5. When the content is live, open **Publish**, enter the **Published URL** and choose **Mark as Published**. The task moves to **Complete**.

Measure the change

6. After monitoring has run for another 14 days, return to **Prompt Analysis** and compare **Mentions** and **Recommendation** for the prompts the task named.
7. Open the report and select **Analyze again** for a new analysis with the same engines. Compare it with the earlier report under **All reports**.

Adding an action records planned work. It does not publish content or guarantee a better result; the next measurements show what changed.

The flow at a glance

- 1. **Check your prompts.** On **Prompt Analysis**, choose **14d**, read Mentions, Visibility SOV and Recommendation, and expand the rows that look weak.
- 2. **Run Deep Analysis.** Select **Deep Analysis**, pick up to 6 prompts about the same need and select **Start analysis**.
- 3. **See what's working.** Read the verdict, the engine bars and **What's working**.
- 4. **See what to improve.** Read each finding under what holds your brand back, and check its evidence.
- 5. **Review the actions.** On **Actions**, read Week 1 first: where to publish, why, what to cover, effort and impact.
- 6. **Add them to Actions Hub.** Select **Add to Actions** on the tasks you plan to do.
- 7. **Work on them.** Assign owners and dates, publish, mark tasks published, then measure and analyze again.

When a result needs explanation

Question	What to check
A prompt can't be analyzed	It needs a completed monitoring run in the last 14 days, and it must be active. Open the unavailable list for the reason.
Start analysis is unavailable	Select at least one engine and one prompt. Only editors can start an analysis.
The run says Didn't finish	Open it for the reason. If there was too much evidence, analyze again with fewer prompts.
No actions this time	No task passed the checks. The Diagnosis still applies, and the tab gives the reason.
A task you expected is missing	Tasks below medium impact are left out. Check whether the answers analyzed cite the page you had in mind.
Numbers differ from Prompt Analysis	Deep Analysis reads only the picked prompts and engines over the last 14 days.
A destination has a note	publisher not confirmed or not cited yet : confirm the site accepts the listing or pitch before you start.

Findings describe the measured AI answers and the pages they cite. They are not website traffic, and a task's impact is an estimate of reach, not a promise of results.
